

CREATION PROCESS - ALINE BRANCH

CHILD BRANCHES

Aline had 10 spouses total and 15 children. To expedite this process, I opted to keep details extremely brief.

Figuring Out Ages:

- All children were born within wedlock; therefore, the children with Spouse 1 are older than Spouse 2's, and Spouse 2's are older than Spouse 3, and so on.
- Children were produced when Aline was between age 20 and 56 (36 years).
- Tried to see if there was a good way of calculating what dice to use but I think I'll just have to wing it. It was getting overly complicated for just figuring out ages of characters we may never even meet, lol.
- Aline was 19 when she married Spouse 1.
- Youngest child should be no younger than 20.
- Oldest child should be no older than 56.
- Each marriage lasted a maximum of 4 years except Spouse 10, which will be the longest marriage and still ongoing.

Other Assumptions:

- All children, for my sanity, were birthed by either Aline (*heads*) or the spouse (*tails*). Adoption will come into play in other branches. Done as a 50/50 coin flip.
- Children of Spouse 1 through 3 are more likely to be deceased than children of Spouse 4 through 7. Children of Spouse 7 through 10 are more likely to be alive than the rest.
- Ancestry is evenly weighted, because I feel Aline would not prefer or care about ancestry of her spouses. Table:
 - 1: Human
 - 2: Elf
 - 3: Dwarf
 - 4: Beastfolk (roll on Animals)
 - 5: Orc

- 6: Goblin
- Partners includes spouses and lovers. Partner details can be created if needed during gaming.
- Children can be born in and out of wedlock, as I feel this kind of societal pressure wouldn't have been that big of an issue in Aline's branch.
- For the children from Spouses 6 through 10: 50/50 chance of having notable partners, and 50/50 chance of having children.
- Number of partners and children, for the sake of my sanity, are kept to a d4 roll.
- Children of 10th Spouse will get 1 partner and 1 child if a positive is rolled.
